The Range Selector: A great tool for locking pixels in place and preserving the original image's settings, the Range Selector is an on-screen slider that enables you to adjust tones and colors at the same time. You can also use the Range Selector to select a specific area within the image, which makes it easy to edit only that area. The Range Selector enables you to select a painting's shadow, midtones, and highlights, as well as any new details that you add to the image.

The Brush: Use the Brush to create natural-looking results by painting in layers of white and black to apply different opacities or textures. Brushes are also used to remove dust, scratches, or other imperfections from old photo prints or negatives.

The Lasso Tool: The Lasso tool is a great tool for creating precise selections, such as a certain area of the photo or a specific subject in the photo. With Photoshop, you can adjust the `_size_` (width) of a selection by using the Zoom tool, and you can adjust the `_shape_` (freeform) of a selection by using the Rectangular Marquee tool. You can also use the Rectangular Marquee tool to create lines and even circles that surround your selection. The Magnetic Lasso tool is also a useful tool for drawing selections. With the Magnetic Lasso tool, you set a starting and ending point and choose an area in the image you want to paint.

The Content-Aware (Smart) Scaling feature: This tool enables you to adjust the size and shape of an image, depending on the area you select. You can even add elements such as new lines to the selection. The Content-Aware (Smart) Scaling tool is a handy feature that enables you to make Smart Objects, which retain the properties of whatever is selected within them. For example, you can make a new layer inside the image that appears to be a particular shape and then add objects to it. As you move the objects in the image, the layer moves with them. If you remove an object, the area that remains in the image is automatically adjusted to match the object's original size and shape. You can easily create and remove objects from Smart Objects. To quickly create a new object, use the Rectangle tool to click and drag and drop to create an object, and then select from several

) $\int \frac{d}{dx} \phi(x) + 2\mu \phi(x) dx$, for $\lambda \in [0,1]$, $\mu \in [-\sqrt{2}, \sqrt{2}]$, and $\phi(x) = \sqrt{x}$. Consequently, the graphs of $L_{\lambda \cdot \mu}$ on $[-1,0]$ and $L_{\lambda \cdot \mu}$ on $[0,1]$ have inflection points at $x=0$ and $x=-1/2$, respectively. The Haar basis ----- We have the following generalization of Proposition [prop:haar]. [prop:haar_general] Let W be an orthonormal sequence of complex-valued functions. Let $\gamma, \kappa \in \mathbb{R}$ such that $\int_0^{+\infty} \int_{-\kappa}^{\kappa} |W(\tau)|^2 d\tau = 1/2$ implies that $\int_0^{+\infty} \int_{-\kappa}^{\kappa} |W(\tau)|^2 d\tau = \int_0^{+\infty} \int_{-\kappa}^{\kappa} |W(\tau)|^2 d\tau$
