What Is 360 Ransomware Infected File Recovery? 360 Ransomware Infected File Recovery is a tool developed by 360 Total Security that has the goal to decrypt files that have been encrypted by the WannaCry ransomware. The application is available in two versions: Professional and Free. Both of them are designed to perform different tasks, and both have a rather similar interface. However, the Professional edition is designed as a fully-featured solution, while the Free version is just a single window, which allows you to choose the files you want to recover and let the tool to analyze them. The 360 Ransomware Infected File Recovery is available to be downloaded from the official website of the company. 360 Total Security offers a 30-day trial version of the application. You can use the trial version to test the application's capabilities and understand whether it will meet your needs. If you are happy with the trial version, you should purchase the licensed version of the software. How Does 360 Ransomware Infected File Recovery Work? The 360 Ransomware Infected File Recovery program scans your entire computer and detects all the files that were encrypted by the WannaCry virus. Only then, you will be allowed to choose the files you want to restore. It is highly recommended that you create a backup of your files. It will allow you to recover your files at a later time if the need arises. You should note that not all the files can be recovered. That is why you should not expect the application to work with the best result in the case where the ransomware infection was massive. The reason is that some of the files might be damaged during the encryption process. Additionally, it is recommended to test the application with the trial version in order to assess its capabilities before purchasing the software. If the application works with your files, you can purchase the licensed version and use it in order to recover the files that were encrypted by the WannaCry virus. What Are The Supported OS's? The 360 Ransomware Infected File Recovery works on the following operating systems: Windows 7 Windows 8.1 Windows 10 How Can I Use 360 Ransomware Infected File Recovery? The 360 Ransomware Infected File Recovery software is a relatively simple application. The scanning process doesn't need advanced graphical skills, and it doesn't contain a lot of features. Still, it does a good job. The software shows the decrypted files and folders in a list, and you can access them all with a single click. In other words, you can see the names, the size, the date of creation and the date of last modification. For a computer user, this means that they'll be able to judge whether the files were encrypted at the time of their system's booting or after the WannaCry ransomware virus took over the computer. Furthermore, you'll be able to check the file permissions and their owner. In order to decrypt the files, the application uses the Clumsy Ransomware decryption algorithm. This means that you'll need to purchase its premium version, but then you'll have the ability to access the hidden files. Pros: Easy to use; It can decrypt all the files with a single click; It shows all the data in a list; The decrypted files can be saved to the cloud; It's easy to access. Cons: It doesn't detect the ransomware virus automatically; It can't recover the files if the password is changed; The decrypted files cannot be saved on the hard drive. Your new PC may not have a cooling fan, and may thus become unacceptably warm. The best remedy for this is to buy a fan that will keep your PC at an adequate temperature. Fan shopping can be a hassle, as all the recommendations can be very confusing. How can you tell which fan will work best for your PC? We provide the answer in the following. A fan is a vital part of any PC's cooling system. A fan can cool down the case of a PC and keep its components safe from the heat. When you're browsing for PC fans, there are two criteria to take into account. The first is the amount of noise a fan will make. Fans that make lots of noise can be very annoying to your PC, and you'll want to select a fan that has a low level of noise. Secondly, you'll want to check that the fan has a dust filter. A clean filter will keep the fan and the PC safe from dust and dirt. You can buy a fan from almost any manufacturer. In fact, you'll find that the vast majority of fans are made by international PC makers
