Check the Steam support site, Steam Support, for things that can cause this and narrow down the cause. Start with the low-hanging fruit first to save time. Failed to initialize Steam is often caused by things that Steam would never initialize, such as drivers or other software. If that doesn't work, then it's a problem with Steam. Run Steam and see if it has any errors, or if you get a window telling you your system is unbootable. If so, try the instructions in those kinds of situations to resolve Steam. The "Failed to initialize Steam" error is caused by something that's got nothing to do with Steam. Sometimes, Steam has an error and causes the other error, so it's difficult to distinguish between the two errors at times. Field of the Invention This invention relates generally to client-server systems, and, more particularly, to mechanisms for guaranteeing that write data published to a server is received by a client. 2. Description of the Related Art Current server systems typically support write-ahead logging (WAL) for logging transactions to disk. If the server loses power while a transaction is in progress, the transaction may be replayed from the last reliable WAL record that was able to be written to disk. In general, this recovery is possible because reliable and non-reliable records are usually not mixed in the WAL. However, the use of the WAL record as a backup is only useful if the WAL record is received. For example, a transaction that is modified after a crash will fail if the WAL record is lost. Accordingly, it is desirable to provide mechanisms for guaranteeing that write data is received by a client. 82138339de
