Through its innovative features and easy-to-use interface, AutoCAD has become the standard commercial CAD application for use in various fields. Although CAD is defined by the American Society of Mechanical Engineers (ASME) as the "design, drafting, and documentation of three-dimensional, pictorial, graphic, or mathematical representations of static or dynamic systems or environments, or both" (ASME 2002), most of its original users were engineers, architects, designers, and drafters. Many of these users were working in the industrial and construction industries, which required them to design and draw specifications for design of very large projects (such as buildings and roads). With the market share in CAD applications having shifted from the office to the mobile (tablet or laptop) and web, the AutoCAD application has evolved from its earlier use. AutoCAD is no longer a standard office tool; instead it has become a widely used mobile and web app. The increased use of the AutoCAD application in design and drafting has resulted in high adoption and usage of this very powerful commercial application. For instance, as per 2018 estimates by IDC, AutoCAD was the most widely used commercial CAD application in the world. This article provides a basic overview of the features and architecture of AutoCAD. An overview of AutoCAD features AutoCAD provides a range of user-friendly features to ease the design and drafting process. Line AutoCAD uses the line object to create and modify objects in the drawing. You can draw lines in the 2D or 3D space using AutoCAD's 2D or 3D tools. You can also draw dashed, stroked, and zigzag lines. You can also create polylines (of various types, for example, polyline), splines (straight, circular, and elliptical), and curves. Polyline and Spline You can use a Polyline object to create a linear drawing element, which can be used to create or modify a linear drawing element. You can also convert a single polyline object into multiple spline objects. For example, if you need multiple spline lines, you can select one polyline object and convert it into multiple spline objects. A spline is a curve-like line object that looks similar to a curve. Arc and Spline You can use the Arc tool to create a circular line element in the drawing

Yet one of the challenges for UK manufacturers is that they often lack a clear route to the EU. Indeed, in its 2014 audit of EU exports, the Centre for Economic and Business Research found that only 34 per cent of UK manufacturers export outside the UK. Most UK manufacturers are therefore potentially exposed to the EU, and find it hard to break into the market. With Britain planning to leave the EU in 2019, the market is likely to change as new trading arrangements are negotiated. So it is critical for UK manufacturers to establish a competitive route into the EU. This programme will help UK manufacturers get better value from their EU exports by: Providing expert advice to UK manufacturers about entering the EU market Liaising with UK trade organisations in the EU to help them develop routes to the EU and build their customer base In the first session of the programme, Dr Gareth Williams from the University of Oxford explores the main factors that influence UK manufacturers in entering the EU market. The next session, attended by experts from industry and government, will look at the most effective ways to export to the EU and provide suggestions for how manufacturers can be competitive. This programme is part of RGI's Selling to the EU programme, a partnership with the Centre for Economic and Business Research. The programme has been designed to provide a series of workshops for UK businesses involved in exporting into the EU. The programme will also be available to businesses and suppliers with EU interests through our sister organisation, the Centre for the Study of the European Union (CSEU). The programme will be delivered over two sessions, on the 7 and 14 March 2018. For more information and to register your interest in either session please email

What's New in the AutoCAD?

SketchUp 2020 is on schedule for release in mid-2020. You will see updates to SketchUp in CAD 2020. AutoCAD 2023 will not be on schedule. Bugs and other issues we've found: (1) AutoCAD's plan to break away from using DLLs and to instead use native C++ has resulted in numerous breakages. Even including the fixes, the version shipped with Release Candidate 2023 has numerous bugs that have not yet been addressed, and we can not recommend using it. (2) When an import error occurs, the import window does not always close. (3) A "3d" palette in the command window does not work as expected. When opening the palette, all the objects of a specified type are listed, not just the types you actually have. (4) AutoCAD sometimes crashes. (5) The commands that make the 3d components of a schematic, such as Insert Component > 3d Object from 3d Object, do not always appear. (6) Some of the new features in 2023 are not usable for some operations. For example, Thinning in 2023 can only be used on objects that are either lines or filled polygons. The issues mentioned in (1) are fixed in the Release Candidate. Issue (3) is fixed in Release Candidate 2023. Issue (4) is fixed in Release Candidate 2023. Issue (5) is fixed in Release Candidate 2023. Issue (6) is fixed in Release Candidate 2023. Note: In Windows 10, the value is "0x2". To turn off the Windows Defender Exploit Guard, open Control Panel > Privacy > Device and change "Turn Windows Defender Security Features on or off" to Off. To verify that the Release Candidate can be successfully installed,
