AutoCAD History The name AutoCAD is a combination of the words Auto (automated) and CAD. The first AutoCAD was introduced in December 1982 as the result of a program developed at AT&T Bell Laboratories by Tom Love and Jim Linn. In the original AutoCAD, a digitized picture of a drawing was the only input to the program. A series of simple commands were used to describe the drawing, and the program was intended to draw the picture on the screen. In contrast, architectural CAD programs, such as those developed by Claris, required graphic artists to create the picture from scratch and often required them to use additional software such as D-Base. AutoCAD was initially designed for use on the Apple II series of microcomputers, but development switched to the C programming language for the Apple Macintosh, where it was first introduced in 1986 as AutoCAD LT. The first 64-bit version of AutoCAD for the Windows platform was introduced in 2001. A complete redesign of AutoCAD was announced in July 2007, and the new program, AutoCAD 2008, was released in December 2008. AutoCAD 2009 was released in January 2010. In July 2011, the first AutoCAD was designated a National Historic Mechanical Engineering Landmark by the U.S. Department of the Interior for its pioneering role in the development of software for computer-aided design. In 2012, AutoCAD started being sold directly online and in retail stores, and it was announced that the current version, AutoCAD 2013, would be the last version of AutoCAD to be sold. AutoCAD 2014, introduced in September 2012, was the first release to require a Windows 7 operating system. AutoCAD 2015, released in October 2012, was the first release to require a 64-bit version of Windows. AutoCAD 2016, released in April 2013, is the first release with a 16-bit license. This means that AutoCAD will only run on computers with 32-bit processors. AutoCAD 2017, released in September 2013, was the first release to support the Windows 10 operating system. **AutoCAD History** The name AutoCAD is a combination of the words Auto (automated) and CAD.
