Google is to launch a new service called Google Maps “Holo” Google said on Wednesday it would launch a new mapping service called “Holo”, aimed at the more “connected” consumers who want to feel as though they are part of a larger world. “Holo” is a nod to “visionary” co-founder and former chief executive of Google, Sergey Brin, who has expressed a wish to see users connected to the internet and

away from “screen addiction”, according to Google. “Holo” will be a social-networking mapping service that encourages users to create and upload photos in their home and then share them with the world. “With ‘Holo’, we want to reconnect the world, bringing people together in their home, and enabling them to share their unique moments and stories with the world,” said Arvind Gupta, senior vice president of Google’s consumer business. “Holo” was developed in secret for the last year, and launched in beta form late last week. Google said it would continue to launch new features on the “Holo” service. The service will initially be available in

California and New York before rolling out to the rest of the United States, before going global. “Holo” will initially be offered free to consumers on tablets, Google said. However, it will also be available for other devices and platforms, it added. The “Holo” service is based on Google’s acquisition of location start-up Waze, which launched a navigation and social service called “Waze Mapper”, in 2011. A new version of Waze Mapper will be released with “Holo”, according to Google. “Holo” is a contraction of “holographic” and “mapper” ca3bfb1094

Workbooks: Workbooks created by users now include a tab for objects created by you, and users can create their own workbooks without the tools to edit the standard ones. Edit or convert

standard workbooks to workbooks by using “Edit Standard Workbook” and “Convert Standard Workbook.” Users can also convert standard workbooks to workbooks in custom workbooks. Standard workbooks are identical to the standard workbooks shipped with AutoCAD. Workbooks created by users are called custom workbooks. Custom workbooks enable you to create your own workbooks by adding your own drawings, commands, filters, and annotations. Use the “Edit Custom Workbook” command and “Convert Custom Workbook” to edit standard or custom workbooks.

Customizable Task Panes: You can now customize the Task

Panes (located at the top of the screen in a floating view) to include shortcuts, tools, and folders that you want to see at all times. Use the “Customize Task Panes” to show or hide these controls in the floating view. Users can also customize the Task Pane size by dragging the edges of the Task Panes, or by adjusting their position in the Task Pane Library. Go To Feature: The Go To feature allows you to directly select objects from the drawing that you want to edit in an external drawing. Use the “Go To” tool with an active annotation to select the objects that are associated with the active annotation. Use the “Go To” tool without an annotation to select
