download It should have removed the commas and changed the
text to uppercase. Is this a bug in the API I am using or something
else? It took me a while to see it was actually working properly. A:
See: How to correctly call RemoveAttribute()? The attribute name
is case-sensitive. So you must ensure that the attribute name
matches with the value of the attribute name. You cannot use the
name of an attribute, you must use the attribute value. Captain
Underpants and the Sensational Satamancers Captain Underpants
and the Sensational Satamancers is a book series by Dav Pilkey,
the author also known for his earlier series Captain Underpants. It
was initially published by Scholastic. The first three books were
published between August 2004 and July 2005 and were also
available as a movie. Synopsis The series features protagonist
George Beard. Born on Halloween, he has a witch for a
grandmother and is named for the last European monarch who
reigned over Great Britain, George IV. His parents don't pay much
attention to him and are generally absent. At school, he finds his
classmates' diabolical schemes as a source of amusement.
George's grandmother who is a witch, convinces George that he is
destined to become the world's greatest superhero. However, as it
happens, to save the world, George and his friends have to go
through all of the trouble of producing a potion that makes them
bigger. Books Captain Underpants and the Sensational

Why I am using Mplayer to play the stream. I have enabled HTTP streaming in the advanced option of Mplayer Mplayer detects that it is receiving an HLS stream, creates the LIVETV.srt and plays it. What I want The LIVESETS function for the clip in question was not found, even though the path to it is "/dev/hls/LIVETV.srt". If I give the path in the regular SRT file it plays the clips. Question Why is it that this is the case? Why is the LIVESET not working when I pass the path of the SRT in the regular format to Mplayer? Is there a fix or workaround for this? Update 1 @Benedikt What I have done to solve this problem is to add this to the mplayer option in Mplayer when using HLS. i.e -livetv "/dev/hls/LIVETV.srt" -livetvrtsrc="/dev/hls/LIVETV.srt" Update 2 Reason Mplayer has a situation in its internal cache that keeps tracking of SRT files that are played. The LIVESET function is used when you play an SRT file. What happens is that when you play an SRT file, the search for that LIVESET function goes into Mplayer's internal cache that keeps track of SRT files that are previously played. This means that when you replay the SRT file that contains the LIVESET function, the function is not found because mplayer's internal cache does not have a record of that LIVESET function. To work around this, Mplayer has a cache that keeps track of SRT files that are previously played. When you play a SRT that has a LIVESET function, this internal cache is updated so that mplayer can find the LIVESET function. This SRT played is marked as the cached version. When you stop playing an SRT, the internal cache is not updated and the LIVESET function is not found. Reason Mplayer does not have a cache for LIVESET functions What happens is that you use the LIVESET function, and then you stop playing
