Excel: Select any cell and the drawing shows you an autocad icon for any objects that are under that cell. You can then drag-and-drop the drawing and the objects will be imported into the selected cell. (video: 2:35 min.) Graphical User Interface: See AutoCAD's new user interface in the video above. Column-

Editing (New UI): Column-editing is a new feature that lets you edit text when you are editing drawings in the “Column View”, “3D View” or “3D Wireframe View”. (video: 1:43 min.) Many Improvements to drawing tools and their behavior: Find new ways to customize the way you work with drawings. Change the way layers

are ordered, delete default layers and add new layers to existing drawings. Make sure the object you are working on is selected. Quickly use predefined tools in the drawing toolbar. Edit drawings easily in Text and Pdf format. Drag-and-drop from the side panel to insert objects into a drawing. Quickly use the Eraser tool to erase

objects. Creation of Parametric objects (Deleted): The Parametric object was designed for creating objects in AutoCAD, but it also works well for creating text in some applications. Instead of starting a drawing or text with an empty space, you can use the Parametric object to create dimensioned text. (video: 3:00 min.) Symbol

Palette Improvements:
See a preview of each symbol in the palette to find out if they will work with your objects. (video: 1:53 min.) Select multiple symbols and add them to your drawings in one step. This is done by creating a dynamic variable in the drawing and referencing the variable in the symbol definition. The symbols

will automatically be created in the same location as the variable.
