# TVPaint Animation 10 Pro V10.0.16 (1-click Run)(registered)

Info .Q: Odd behavior with regular expression replacements For some reason, when I run this in Visual Studio, the first match occurs. void Main() { string s = "test"; string s2 = "test"; Regex r = new Regex("TEST"); r.Replace(s, s2, 1); } Instead, it should iterate through the whole string, and only replace the first occurrence. A: Look at the documentation: The behavior of Regex.Replace is not affected by the option flags except for ReturnReplace. The ReturnReplace parameter, if non-null, indicates that the method should return the result string. If ReturnReplace is null, Regex.Replace returns a new string in which the search expression matches replace the entire string. In this case Regex.Replace returns only the replacement string. Otherwise, Regex.Replace returns all of the result of the search operation. A: The way you're using it, you're returning a new string instead of modifying the input. Make sure you're not returning the string you're matching. Q: Clear Folder on Suse, why not on Debian We've implemented a web based and desktop program that will make an archive that hold several smaller archives, for, e.g. e-mails. We just switched to Debian and there we have Suse as another operating system which also supports this usage. The folder we need to clear is /var/backups/date. One thing I don't understand is why on Debian and Suse, it's performed as root, but on Suse it also requires sudo. The Suse guide is this one, but I also need a Debian version. I've already cleared it, but now I'm stuck. I've cleared it using suse by sudo rm -rf /var/backups/\*, but how would I do it as a normal user on Debian? A: I solved it by changing the file /etc/backups.d/passwd as I described here.
