We are devoted to provide financially rewarding opportunities to the overlooked artists of the industry. MEMBER ARTIST: DADTS Video. You are invited to join the DADTS YouTube Channel. The finest unsigned artists on the net need our help to get on the front page of YouTube and YouTube Music with our DADTS Video Contest. DADTS.com Best of luck!The present invention is generally related to newly synthesized ligands for prostate specific membrane antigen. Prostate specific membrane antigen (PSMA) has been isolated from human prostate cancer cell lines. PSMA is a type II integral cell-surface protein which is overexpressed in prostate tumors and is particularly associated with prostate cancer. PSMA binds to amino acids containing a terminal phosphate group, including phosphate groups which are linked to lysine or arginine. For example, PSMA binds to phosphate groups which are linked to lysine or arginine on glycosaminoglycans, proteoglycans or glycoproteins. Both the high expression level of PSMA in prostate cancer cells and the high specificity of PSMA as a target for imaging and therapy has created a need for compounds which specifically bind PSMA. Sir, We thank Dr. Ryu and colleagues for their comments regarding our paper entitled "Real-time sonography of the midface: An evidence-based comprehensive review for facial cosmetic procedures."[[@ref1]] The use of high-frequency transducer for ultrasound examination of the facial anatomy has been described for over a decade,[[@ref2]][@ref3]] and most facial plastic surgeons are aware of its applications. Nevertheless, we believe that traditional 2D gray-scale sonography is still the mainstay for the majority of facial cosmetic procedures. As mentioned in our paper,
