... But even in these conditions, some people could do something. For example, in 1946, at the Metallist plant in the city of Stalino (Donetsk), the production of new types of weapons was organized, in particular, aircraft missiles with a flight range of 200-300 km. Missiles, without engines and aiming devices, were launched from a conventional car launcher and did not carry an explosive charge, however, when they hit the target, they exploded.
