## Phoenix OS V 3.1.1.3.42 {64}bit 64 Bit [TOP]

Open your phone settings Choose the PDA option in your account page Select "install apps from unknown sources" in the pop-up menu Tap "install" on the next screen. This will take a while. Open the Play store and search for "Phoenix OS" Tap the Phoenix OS icon installed on the home screen Open the Phoenix OS App, and tap "install" on the screen. Install Phoenix OS on your computer. Make sure that your phone and computer are connected to the same network. Open the Phoenix OS App, and tap "Clear storage" on the screen. If you tap "Download", Phoenix OS will download the necessary files and then install itself. Wait for the installation to complete. Open the Phoenix OS App, and tap "Restore Default" in the notification bar. Tap the Phoenix OS icon on the home screen, and choose "Load Default". Follow the standard installation steps, but in step three, follow instructions 3 and 4 in the "Installing Phoenix OS on the desktop" section to complete the installation. Your computer will now reboot, and you should have a fully functional computer. The instructions are based on Windows 8.1, but it is very similar to the process for Windows 7. The only step that was missing is the "Installing Phoenix OS on the desktop" section, but everything else is pretty much the same. -- Finally, I highly recommend checking out the UEFI settings on your computer. This is a good reference for navigating and customizing your UEFI and boot manager. If your computer is old, your UEFI settings may not be particularly useful. The Phoenix OS is based on modern hardware and software. If you are having problems with your UEFI, you may want to check out these tutorials instead:
