from the videos and reports they have released we have seen evidence that their methods were mainly to lock the game (forcing you to kick out from home screen, into your launcher, and then having the "game protected" window popping up) and auto-start 'game launchers' through that if you play the game. far cry 5 wasn't the first ubisoft-published shooter to feature denuvo anti-tampering. in fact, it didn't even crack the first denuvo patch, v1.4, that came out january 11th, 2017. far cry 5 was instead the first to handle v1.5 denuvo, which came out on february 7th. but with that new version of denuvo came a new feature to make it more effective at slowing down pirates - timeouts. a second around i purchased assassin's creed origins in order to test denuvo's performance impact. not only was there zero drop in performance, but even three hours after the denuvo removal the game was able to maintain its smooth gaming experience. the impact is marginal but it's important to know that removal does impact performance in some way. i contacted the owner of the crack to get a 3rd party verification of the game's performance and he responded accordingly. official explanation denuvo is a form of drm and it's designed to halt pirated games in their tracks. it's made to block cracked versions of the game from being played after the crack is removed. once the crack is removed denuvo no longer gets in the way of a play and the game will play at its original frame rate. this is a neutral good as it empowers those who bought the game legally in the first place. as for the game itself, i tested the game before and after we cracked it and there was an almost imperceptible difference in frame rate.
