to summarize our agenda in one sentence: we've tried to make every type of envelope available to all users. to make that possible, we merged all envelope types into a common synth. this way, users can achieve their envelope goals using a single type of envelope. in the future, more envelope types may be added by us, but we'll see if we can make them available to the end users for free. elixir 2 is more than a simple increment, it's a breath of fresh air. a breath of fresh air that improves everything. now, you can more easily create new and

interesting sounds. you can easily compose new and varied ideas. now, you can create more complex and intricate sequences, in particular, the ones that combine phase and/or duty-cycle-based modulation. in total, this synthesizer has improved the whole lot, and it's for you to imagine that the majority of the features have been improved. one of the major improvements of elixir 2 compared to the original is the improved virtual patch memory. these patches are so much easier to remember, and they are much more expressive to program and use. virtual patch memory has no set size limit, while the original could only use 64-k patches. you can also use other types of memory, but these are much more limited. elixir 2 also added an expressive parameter knobs system. for instance, the envelopes of each voice can now have their own knobs to control them. each voice also has dedicated knobs for each of the filters. this new system will guarantee users have a better control of their sound and easier to compose their ideas.
