Increase Exposure: Easily adjusts the brightness, contrast, and gamma levels and the color curve. You can now render your high quality pictures, documents, web pages and video clips to an economical lossless format on your Windows computer. A robust stand-alone program, it can save you hundreds of dollars in software licensing costs, and can also increase your performance in many ways. Included with this software is a complete support site with helpful instruction manuals and helpful downloads. All software has been tested to make sure it works and is free from defects.

Lossless is the industry standard format for compression. It is an amazingly efficient means to compress video, images, and other files. The result is saved video that is indistinguishable from the original, and pages that are almost 70% smaller. Good compression preserves important aspects of the original file without adding visual distortion or creating unnecessary artifacts. Since a lossless format is mathematically exact, no adjustments have to be made after compression. In addition, the saved files can be opened and played back without loss of quality. No editing is needed to see the original picture or video.

**File Definition:** A lossless file can be compressed to as little as 1/2 of its original size. Therefore, a lossless video file (AVI, MPG, WMV) can be compressed to about 25% of its original size. A lossless page can be compressed to about 70% of its original size.

**More Info:** The most popular formats are RIFF, AVI, WAV, JPG, PNG and GIF. Another advantage is that lossless can be used for any type of file, even if they have different file extensions. It is even possible to save a file in the background, then continue working on it in a normal fashion. Free software provides a smaller file, but it has limited compression. With higher quality lossless, you can enjoy the benefits of excellent compression without having to pay for software. Lossless is the industry standard for storing music, images and other files. As the

name implies, it is a completely lossless means of compression, and requires no corrections after compression. File Definition:

Compress: Lossless: Quality: Video: 2-3 Mbps Image: 1,000-3,000 KB Audio: 1.2-
