DavMail Gateway is a program that allows you to create a mail-enabled file server on your system. This can be done on an existing system or you can build a new system. What is DavMail? DavMail Gateway is a program that allows you to create a mail-enabled file server on your system. This can be done on an existing system or you can build a new system. The way that DavMail Gateway works is by allowing you to use a mail program to connect to a server on your computer. This server is then able to provide the usual mail services to a user or it can act as a mail server. DavMail Gateway is not a mail client and does not provide a graphical user interface. The mail server and client are purely command line. DavMail Gateway is not compatible with Outlook nor Outlook Express. The clients that it supports are: - Thunderbird - Evolution - Eudora - Mutt - Claws - Pine - Juno - Nulab - NcFTP - Wox - Mailspam - Mandrill - SerMail - SmarterMail - Rediffmail - Spamfire - Clusty - Opera Mail - TBMail You can create a mail-enabled server in one of two ways. Firstly, you can choose to make the server as a proxy, and then use a mail client to connect to it. Or, you can make the server to be an actual mail-enabled server. Then, when the program is started, it will act as a Mail Agent and connect to the server for you. The mail client can then use the connection to retrieve email messages. This program can also be used to set up a mail server on a Windows system that can be used by any email client. Why use DavMail Gateway? KeyMACRO software is an advanced tool for managing encryption keys. It provides an integrated interface for saving and managing public and private keys in various formats. You can use the software for data encryption, key management and as a tool for securely connecting to various systems. Why use KEYMACRO? Access to sensitive information can be a security threat, which is why encryption is usually used. Data encryption reduces the chance of the information being accessible by unauthorized people. However, if you forget the decryption key, it can prove disastrous. KEYMACRO can be used to prevent this from happening by providing you with the keys. Besides, you can also generate, protect and secure your private key. Features of KEYMACRO: • Simple and user-friendly interface • Supports various types of keys • Enables two-way data encryption • Integrated SSL/TLS support • Easily configurable with C# and C++ scripting • GPG and SSH support • SSH keys protected with passphrases • Public key protected with passphrases • Private key protected with passphrases • Supports various signature algorithms • Supports RSA, DSA and ECC • Supports different key lengths and key sizes • Supports several methods of key import • Supports CAB file import and export KeyMACRO is not a software for everyone, as it is relatively complicated. However, it offers advanced features that are not available in most other tools.
