This gives you access to your images in one location, and minimizes the chances of your Lightroom collection being lost or corrupted when you upgrade to a newer version. In addition, you can start transferring your images to the cloud from the desktop application. Lightroom 5 is a young and promising product, though. If you are new to Lightroom or are just upgrading to it, I would recommend it to anyone. For photo studios that need image management and editing software, it is a worthy choice for folks that currently use Apple's Aperture. For those of us that do all of our photo work on our PCs at home or at coffee shops or on the road, Lightroom is an excellent choice. For veteran professional photographers, there's nothing holding Lightroom back. It's a more polished experience than that of the previous version and offers more things, too. More importantly, it is a rock-solid reliable product that can be counted on to do what it does best. Once you will have started using the brand new version of Lightroom, you will like it much better. Make sure to give it some time for it to get molded to your personal workflow. Eventually, you will be as comfortable using Lightroom 5 as you are using Photoshop CC on your laptop. To learn more about Lightroom 5, check out the Learn Lightroom 5 page . I also like the ability to crop automatically. You can crop the elements, such as a star, track pad, and few thin to fit nicely into your photos feed. Remove the rest of the photos with no effort. You can draw on the photo and you will see the red lines that will align with your drawings.
