The image size is 28x64x63. I have tested Matlab's hist1 function but it runs out of memory and crashes with a memory exception. Is there an efficient way to do this? Or am i forced to split the image into smaller images and then plot them seperately using bar(x,y)? Thanks! A: Perhaps converting the data into a one-dimensional array before you do the histogram would help. It would also prevent lots of reallocation of storage. Something like this: `%// Generate data using im2double data = im2double(imread('peppers.png')); histogram(data) %// returns a 2D histogram %// Do a 1D histogram on all the data (it will be much faster) histogram(data(:,1),data(:,2))` Q: Why can't I use conditions inside include_once? I have following PHP files: file1.php file2.php Now I expect to see a "test", but nothing happens. Only, when I remove the include_once, everything is OK. Why? A: include_once() will include the file
