Although Lightroom is a camera RAW plugin, the latest version has a button to post your edited photos to a Facebook album. (There is no photo organization, such as a sidebar or tabs.) Publish to Instagram is also available in this version but there is a settings panel to limit the image size and final upload resolution. Manuel has talked about Lightroom 5 in his latest blog post . The biggest addition is the Collect tool. It's a new feature that can be used to collect many other actions, save states, and even hashtags. There are tabs for working on actions and user presets at the top. There is a new action named Cropping (as you might guess), which might help in annotating where it is necessary to crop a photo. What It Does: The Crop tool will let you resize the image to fit into a standard frame in your layout. This may be useful if you're dealing with very large images, those with wide borders, and elements that overrun the borders of the image. Once the layer is finalized, you can adjust the eraser over your layer or crop your graphic. The easy-to-use interface of Photoshop Camera will allow you to remove areas of an image and play with the individual pieces of the image. Just remember that the eraser is bound to the layer so make sure you create a new layer and work on it as you'd expect to erase anything on the layer. Here's how to do it: Before applying filters and other effects, use the eraser tool to remove and edit a background. To do so, simply select the eraser tool from the tools panel on top of Photoshop Camera and then you can erase the background. You can do this over a layer or individual selected area. Use the options for blending and changing the opacity of the eraser to make the end result most accurately represent what you want to achieve.

Easy Peasy!
