Installing Adobe Photoshop is a very simple process. First, you will have to download Adobe Photoshop. After you have the download, you will need to extract the file to your desktop. Then, you will have to run Photoshop once the file is extracted. Once Photoshop is run, follow the instructions and answer all of the questions. Once the install is complete, you can go to the Adobe website and buy a license for Photoshop. You can purchase Photoshop from the website for anywhere from \$50 to \$750. When you have the license, you will need to copy it from the CD or DVD to your computer. The CD or DVD will usually have a bar code on it so that you can identify the version of the software you have. Depending on the version of Photoshop that you purchased, you will need to go to the Adobe website and download a patch file to unlock the full version of the software. The CD or DVD will have a bar code for the version that you have, so be sure to match this code to the patch file that you downloaded. After you have the patch, you will need to run the installer and follow the instructions. Once the installation is complete, you can start using Photoshop.

You can open and close panels to focus on a specific task. However, some panels are stubborn about autohiding. The panels themselves open and close automatically. The panel you share the browser window with can be dragged around, but the panel you're using can't. The integration of social networking and Adobe updates is always a good idea. Comparing images on social networking sites is a huge bonus. However, you will have to give up some of your privacy to get it. Using the new UI does impact workflow. Many dialogs are now customizable, so you can decide how specific icons look (such as the "Reset" button). Previously you had to use the toolbars to customize these. The toolbars stay the same and are easier to navigate. Also, you can find right-clicking on the toolbars to make shortcuts you can use when editing the image. Yet another way to edit is through the Tab palette. Since this release you can take advantage of the new Curves tool to make your colors more realistic. However, the tool does not replace the default curve; it is just a secondary tool. Like Lightroom, Adobe places the image on a grid for the Curves tool. If you want to, you can create a custom grid which is probably what I will do. Curves can be used to explore colors, capture the highlights, the mid-tones, and shadows. You can even apply a custom curve to highlight part of the image, which is great for adding parts of an image you want to emphasize or devalue. The existing keyboard shortcuts remain unchanged. You can use `Cmd+Ctrl+Scroll` or zoom in and out with `Shift+Opt-Keys`. You can browse through layers in the Layers panel by pressing `Cmd+Left Mouse` or double-clicking. A new feature is the Eraser tool. When used to select an area of the image in the Layers panel, you can press the `Del` key. This lets you hide the layer without deleting it. However, when you double-click the layer in the Layers panel, it treats the layer as merged with the top layer of the image (image-level layers). Overall, I like this feature very much because it is quick to hide layers. The most common use of the Eraser is to remove unwanted objects in the image, such as man-made tools, plants, and people.
